

Showplace **CINEMAS**

Personal Closed Caption Devices available at Showplace Cinemas

Personal in-theater closed captioning system for hearing-impaired movie audiences. Closed captions are transmitted to a receiver over wireless frequencies. With an 80-meter (242 feet) signal range, these devices can be used from any seat in the house.

This viewing device consists of a small OLED display on a bendable support arm that fits into a theater seat cup holder. The high-contrast display includes a privacy visor so it can be positioned directly in front of the movie patron with minimal distraction to neighboring patrons.

****PLEASE NOTE** Closed Captioning is subject to the content made available from the film distributors. Not every film is enabled with the content necessary for closed captioning. Please contact theatre directly when inquiring on a specific film.**

You may check out a device from the box office attendant when you arrive.
